

COMMENTS: ENERGY TAX REFORM WORKING GROUP:

Please take note of the results Europe has had with respect to wind and other power sources of renewable energy. **They have been down right dimall results -- they have cost jobs and raised prices on energy costs. (8% in Germany)**

Politicians have already spent 24 billion in taypayers dollars on windmills -- it only owrks when mother nature cooperates they use of \$52 in subsidies for eery million watt-hours generated. NOT real efficient.

While it is important to find sources of green energy WIND is NOT one!!! Why would we give 545 Millon advantage to the wind industry??? Spains has ended wind subsidy as it had proven so unviable. So they came to US to underwrite and industry that has very dubious results.

Taxpayers should NOT be forced to subsidize these companies they have not proven to be successful as energy producers -- We ARE WASTING TAXPAYERS MONEY!!!!

EDUCTATE our students so we can find solutions that are successult and really work!!!!
